

Nikolaas Steenbergen

Staff AI Engineer & Consultant / Vision, LiDAR & Language Systems

Professional Summary

AI consultant with over 10 years of experience specializing in the development of production-ready computer vision and Large Language Model (LLM) solutions. Proven track record of architecting and deploying automated data analysis pipelines for clients in civil engineering, autonomous vehicles, infrastructure and mapping. I help businesses leverage complex sensor data (Images, other modalities), LLM agents to automate processes, validate data, and create novel products.

Core Competencies

AI/ML	Deep Learning, Computer Vision, LLM Agent Development, Normalizing Flows, PyTorch, TensorFlow, Scikit-learn, OpenCV, Open3D
Data Processing	Images & Point Cloud Analysis, Apache Flink, Distributed Systems, ROS
Languages	Python, C++, Java
Tools & Platforms	AWS, Docker, Git, Kubernetes

Professional Experience

- 01-2026 – Present **Senior/Staff AI Engineer - Consultant, Deep Safety GmbH.**
- Developing novel algorithms for uncertainty estimation for monocular depth estimation networks. General support in organization and delivery of smart camera software for US based humanoid robotics company.
- 11-2024 – 10-2025 **Lead AI Engineer - Consultant, Reiner AI.**
- Architecting an agentic RAG platform using (V)LLMs to provide intelligent support for civil engineering firms.
- 07-2024 – Present **Founder, LynxLabs.ai.**
- Architected and deployed a computer vision pipeline for processing aerial Image and Lidar data.

09-2021 – 12-2024 **Cofounder, 030Solutions GmbH.**

- Co-founded a deep-tech venture and engineered its core product, a fully automated geospatial analysis pipeline for infrastructure mapping.
- Directed all business functions of the company, including P&L management, strategy, and client relations, creating a highly profitable and capital-efficient business model.
- Secured a foundational, six-figure yearly enterprise contract by delivering a solution that automated broadband expansion mapping for a surveying client.
- Architected and implemented the software for processing complex Image and Lidar data using deep learning.

2021 – 09-2021 **Delivery Manager, TomTom.**

- Managed and set team OKRs, communicating progress and removing impediments to achieve deadlines.

2019 – 09-2021 **Senior Software Engineer - Deep Learning, TomTom.**

- Responsible for architecture and implementation of automatic analysis software of Image and LiDAR data for creating maps for cars through machine learning and computer vision.

2016 – 2019 **Software Engineer - Deep Learning, Autonomos/TomTom.**

- Developed software for autonomous vehicles (C++, ROS), computer vision, machine learning.
- Built a deep learning team from ground up.

2015 – 2016 **Researcher, DFKI - Intelligent Analysis of Massive Data.**

- Drove research and development for distributed systems and machine learning, contributing to Apache Flink.

2011 – 2011 **Student Research Assistant, University of Bremen.**

- Ported computer vision project from Python to C++ for performance gains.

Education

2012 – 2014 **Master of Science – M.Sc, University of Amsterdam.**

Artificial Intelligence

2009 – 2011 **Bachelor of Science – B.Sc, University of Bremen.**

Digital Media

Languages

German **Native**

English **Fluent**

Spanish **Good**

Dutch **Basic**

Key Publications & Projects

- Open Source Contributor to Google Tensorflow, Apache Flink, and Open3D (C++, Python, Java).
- 3rd place in the Iranian Open, Teheran. Robocup, standard league platform with the Dutch Nao team (Autonomous Robot Soccer).
